Report Overview

Muscle-on-a-Chip is a biosimulation technology used to simulate the structure and function of human muscle tissue. This technology is usually implemented on a microfluidic chip or a microbial chip. Artificially cultured muscle cells are planted on the chip through tissue engineering and biotechnology methods to simulate various characteristics of real muscles, such as the contraction and movement function of muscle fibers. Muscle-on-a-Chip can be used to study the pathogenesis of muscle diseases, evaluate the efficacy and toxicity of drugs, and develop new treatments. This technology provides a highly controllable and reproducible experimental platform for muscle-related research, helping to advance the field of muscle medicine.
