## Abstracts

Musculoskeletal system disorders are conditions that affect the body's muscles, bones, joints, ligaments, and related structures. These disorders can be caused by various factors, including trauma, degenerative changes, genetic predispositions, or inflammatory conditions, such as arthritis, osteoporosis, or muscular dystrophy. They often result in pain, stiffness, and limited mobility, affecting the patient's quality of life and ability to perform daily activities. In this report, we study the drugs and medical devices for musculoskeletal system disorder. The growing aging population and the rise in sedentary lifestyles have significantly increased the prevalence of musculoskeletal disorders, such as osteoarthritis, osteoporosis, and chronic back pain. As people live longer and remain active into older age, the need for effective treatments and interventions for musculoskeletal conditions has surged. Technological advancements, including minimally invasive surgical procedures, biologics, and innovative orthopedic implants, further drive market growth by offering improved patient outcomes and faster recovery times. Additionally, greater awareness and diagnosis rates are helping expand access to treatments, boosting the demand for both therapeutic and preventive solutions in this sector. The major challenge in the musculoskeletal system disorder market is the high cost of advanced treatments and technologies, which can limit accessibility for patients, especially in low-income regions. Many individuals and healthcare systems struggle to afford these solutions, even as they become more effective. Furthermore, stringent regulatory requirements and lengthy approval processes for new devices and biologics can slow down the introduction of innovative products to the market. Reimbursement issues and lack of adequate healthcare infrastructure in certain areas also hinder market growth, posing barriers for companies trying to expand access to high-quality, effective treatments for musculoskeletal disorders. North America is the largest consumption place, with a revenue market share nearly 52.1% in 2023. Following North America, Europe is the second largest

consumption place with the revenue market share of 23.11%.

The global Musculoskeletal System Disorder market size was estimated at USD 152.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
