## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Mycoplasma Gallisepticum Inactivated Vaccine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Mycoplasma gallisepticum inactivated vaccine is a kind of vaccine which is made by Gallisepticum strain culture, inactivation and emulsification with mineral oil adjuvant are biological products mainly used to prevent chronic respiratory disease (CRD) in chickens. They are oil-in-water uniform emulsions and need to pass sterility, safety and efficacy tests to ensure the immunization effect (such as air sac protection rate of immunized chickens ? 60%). They are usually injected subcutaneously or intramuscularly and are suitable for chickens over 40 days old. Based on the calculation that the scale of China's animal vaccine industry will exceed RMB 19 billion (about US\$2.7 billion) in 2024, poultry inactivated vaccines will account for about 25% (about US\$675 million) and China's 20.5% share of the global poultry inactivated vaccine market, coupled with the growing demand for respiratory disease prevention and control in the global poultry farming industry (especially the trend of large-scale farming of laying hens and broilers), the global market size is expected to be around US\$1 billion in 2024. In the next three years, it will benefit from the strengthening of biosafety policies (such as the promotion of compulsory immunization), the application of new adjuvant technology (such as nanoemulsion to enhance immunogenicity) and the popularization of vaccines in emerging markets in Africa and Southeast Asia, and is expected to exceed US\$1.5 billion in 2031.

The global Mycoplasma Gallisepticum Inactivated Vaccine market size was estimated at USD 1007.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
