Abstracts

Mycotoxin Deactivators refer to a class of additives specifically used in feed to remove or neutralize the harmful effects of mycotoxins (such as aflatoxins, vomitoxin, geraralenone, etc.) in feed. Mycotoxins are toxic chemicals produced by molds, which are widely present in grains and feeds, and are prone to contamination, especially under humid and improper storage conditions. These toxins are significantly harmful to animal health and may cause poisoning, immunosuppression, decreased production performance and other problems. Mycotoxin Deactivators can effectively remove or render harmless mycotoxins through physical adsorption, chemical detoxification or biodegradation mechanisms, reduce their accumulation in animals, thereby ensuring animal health and growth, and improving feed safety and production efficiency.

The global Mycotoxin Deactivators market size was estimated at USD 2158.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.20% during the forecast period.
