### Report Overview

Myocardial perfusion imaging is an imaging device which work non-invasively to show the blood flow, myocardial perfusion imaging also known as nuclear cardiology test. The main function of this imaging to show the blood flow to muscle of heart or myocardium and to identify the absence or presence of CAD (coronary artery disease). Myocardial perfusion imaging show 3D image. Myocardial perfusion imaging two technique, such as PET (positron emission tomography) and SPECT (single photon emission computed tomography). Myocardial perfusion imaging is useful in checking of chest discomfort for facing problem in blood flow to muscle of heart that is caused by angina (blocked in heart arteries) or by narrow in the arteries vessels. The myocardial perfusion imaging process as a small amount of radioactive material is injected that can travel to muscle of heart, then the scan process started to monitor the flow. The Myocardial perfusion imaging testing manage to treat the CAD (coronary artery disease) for medical therapy and revascularization process.
