## Abstracts

N-decanoyl-N-methylglucamine is a non-ionic surfactant belonging to the class of alkyl glucamides, chemically synthesized by the reaction of methylglucamine with decanoic acid (capric acid). It functions as a mild, biodegradable surfactant with excellent foaming, emulsifying, and solubilizing properties, making it particularly suitable for personal care formulations such as shampoos, body washes, and facial cleansers, where gentle yet effective cleansing is desired. Its structure combines a hydrophobic decyl chain derived from coconut oil with a hydrophilic glucamine headgroup, resulting in a compound that is both effective at lowering surface tension and compatible with sensitive skin due to its low irritation potential.

The global N Decanoyl N Methylglucamine market size was estimated at USD 42.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
