N-Hexadecane is used as a reference material for solvent, gas chromatography comparison sample and determination of diesel combustion quality. The cetane number of diesel oil is equal to the percentage of decane contained in the standard fuel (mixture of cetane and a-methylnaphthalene) when the combustion quality is the same as that of the evaluated diesel oil under the specified working conditions. Cetane number is between 40-55. In recent years, 2,2,4,4,6,8,8-heptamethylnonane (HMN) used in synthesis has replaced a-methylnaphthalene as reference material.
