Report Overview

N-TOPCon is a tunneling oxide passivation contact solar cell technology based on the principle of selective carriers. Its cell structure is an N-type silicon substrate cell. A layer of ultra-thin silicon oxide is prepared on the back of the cell, and then deposited. A layer of doped silicon thin layer, the two together form a passivation contact structure, which effectively reduces surface recombination and metal contact recombination. Compared with P-type crystalline silicon cells, N-type crystalline silicon cells have higher minority carrier lifetime, no light-induced attenuation, good low-light effect, and small temperature coefficient.
