Abstracts

N-Vinyl-2-pyrrolidone (NVP) is a versatile, water-soluble monomer characterized by the presence of both a vinyl group and a lactam ring, enabling it to undergo polymerization and copolymerization reactions to form polyvinylpyrrolidone (PVP) and various copolymers with tailored properties such as film-forming ability, adhesion, complexation, and dispersion stabilization. Its reactive double bond allows for free-radical polymerization, making it a key intermediate in the synthesis of polymers widely utilized across pharmaceuticals, cosmetics, agrochemicals, adhesives, coatings, and electronics, where its biocompatibility, solubility, and binding characteristics are highly valued. The global market for N-Vinyl-2-pyrrolidone (NVP) is experiencing steady growth, driven primarily by increasing demand from the pharmaceutical and personal care industries where its polymer, polyvinylpyrrolidone (PVP), is extensively used as a binder, disintegrant, film-forming agent, and stabilizer. The expansion of generic drugs, rising consumption of cosmetics and haircare products, and growing applications in agrochemicals and water treatment chemicals further contribute to market dynamics. Geographically, Asia-Pacific dominates both production and consumption, with China and India as key hubs due to robust manufacturing capabilities and end-user demand, while North America and Europe remain significant markets with a focus on high-purity grades for pharmaceutical and specialty applications. Key market players are investing in capacity expansion and technological advancements to improve production efficiency and meet stringent regulatory standards, though the market faces challenges such as volatility in raw material prices (particularly derived from acetylene and formaldehyde) and environmental concerns related to synthesis processes. Future growth is anticipated to be fueled by emerging applications in energy storage, particularly in binders for lithium-ion battery electrodes, and advancements in biomedical fields such as drug delivery systems and hydrogels.

The global N Vinyl 2 Pyrrolidone (Vp) market size was estimated at USD 520.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
