Abstracts

A nail hammer is a type of hammer and is the general term for hammers used to drive nails (nails). The center of gravity of the head is on the striking side, which prevents the hand from shaking when driving in nails. On the opposite side of the hammering side, there is a nail puller like a crowbar. The center of gravity is more in line with the striking side than that of a hammer, which is a similar tool. Nail hammers are used in a wide range of situations. They can be used in two ways with a single hammer: driving in nails and pulling out nails that have been missed. As a nailing tool, it is used in tasks involving a lot of wood and plastic. For example, it is frequently used in "house construction" and "DIY" situations.
