Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Nano Silica Powder competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Nano-silica powder is a high-purity amorphous silica material with a particle size of 1-100 nanometers, which has a high specific surface area, strong adsorption and excellent thermal stability. Its surface is rich in silanol (Si-OH), which can be modified to enhance dispersibility. It is widely used in rubber reinforcement, coating thickening, drug carriers, electronic packaging and cosmetics. According to the preparation method, it can be divided into gas phase method (such as gas phase silica) and precipitation method. Among them, the gas phase method product has higher purity and is suitable for high-end applications.
