The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Nano Thruster competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global nano thruster production reached approximately 1637 units, with an average global market price of around K US\$ 35 per unit. Nano thruster is a kind of device that uses nano materials or micro/nano scale structures to provide precise and controllable minimal thrust for tiny objects. Its core feature is that the thrust is extremely small and accurate, usually up to the order of micro-N or even nano-N, suitable for scenes with extremely high accuracy and stability requirements. The annual production capacity of a single production line for nanothrusters typically ranges from 100 to 200 units per year, with a gross profit margin of approximately 30%. Downstream consumption of nanothrusters is 32% for military applications, 68% for civilian applications.

The global Nano Thruster market size was estimated at USD 58.12 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.50% during the forecast period.
