Abstracts

Nanocomposite hydrogel scaffolds are scaffold structures with highly adjustable properties formed by combining nanomaterials with hydrogels through advanced preparation technology. Nanomaterials (such as nanoparticles, nanofibers or nanotubes) can enhance the mechanical strength, stability and biological functions of hydrogels, such as promoting cell growth and improving drug release performance. This scaffold not only retains the high hydration and biocompatibility of hydrogels, but also achieves better mechanical properties and biological activity through the introduction of nanocomposites. It is widely used in biomedical fields such as tissue engineering, drug delivery, and wound repair.

The global Nanocomposite Hydrogel Scaffold market size was estimated at USD 368.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.60% during the forecast period.
