Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Nanostructured Lipid Carrier competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Nanostructured lipid carriers are a new type of lipid-based nano drug delivery system, consisting of nanoparticles composed of a mixture of solid lipids and liquid lipids. Compared with traditional solid lipid nanoparticles (SLNs), NLCs introduce liquid lipids into their structure, which improves drug loading capacity, drug stability and release controllability. They are widely used in multiple routes such as oral, injection, transdermal and topical administration, and are particularly suitable for the efficient delivery of poorly soluble drugs and bioactive molecules.

The global Nanostructured Lipid Carrier market size was estimated at USD 230.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 15.10% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Nanostructured Lipid Carrier market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
