Report Overview

Naphthalene (CAS 91-20-3) is a white crystalline hydrocarbon derived from coal tar or petroleum, primarily used as a precursor in the production of phthalic anhydride, which is further processed into plasticizers, dyes, and resins. It is also widely employed as a moth repellent and in the synthesis of pesticides, surfactants, and pharmaceuticals. The compound's volatility and distinctive odor make it suitable for industrial applications, though environmental and health concerns have led to regulatory scrutiny in some regions. The market for naphthalene is heavily influenced by demand from the construction and agriculture sectors, particularly in emerging economies, while shifts toward bio-based alternatives and stringent regulations in developed markets pose challenges to growth. Pricing trends are closely tied to crude oil and coal tar feedstock availability, with Asia-Pacific dominating production and consumption due to rapid industrialization and chemical manufacturing expansion.

The global Naphthalene (CAS 91-20-3) market size was estimated at USD 1255.39 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.00% during the forecast period.
