Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Naphthol AS-BS competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Naphthol AS-BS is an ice dye intermediate with the chemical name 3-hydroxy-N-(3-nitrophenyl)-2-naphthamide, and its appearance is light beige or yellow-green powder. Its chemical structure contains nitro and hydroxyl groups, which give it excellent coupling properties. Chromatophenol AS-BS is mainly used as a red primer for cotton dyeing. It can be combined with the bright red base R to obtain rose red, and with the bright red base G to obtain a gorgeous pink with blue light. With the high-end demand of the textile industry, chromatophenol AS-BS products with high light resistance and high color fastness will be more popular.
