Abstracts

Natural adhesion barriers are medical devices or materials designed to prevent the formation of abnormal fibrous bands (adhesions) between tissues and organs following surgical procedures, particularly in abdominal, pelvic, cardiac, and spinal surgeries, where such adhesions can lead to complications such as chronic pain, bowel obstruction, infertility, or difficult reoperations. These products function by creating a temporary physical separation between healing tissue surfaces during the critical postoperative period, utilizing materials such as synthetic polymers (e.g., polyethylene glycol), hyaluronic acid-based gels, cellulose derivatives, or collagen sheets that are either absorbed by the body over time or remain inert. The effectiveness, resorption profile, ease of application, and compatibility with minimally invasive techniques are key product differentiators, with innovations increasingly focused on combination products that incorporate anti-inflammatory or drug-eluting properties to enhance outcomes.

The global Natural Adhesion Barrier market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
