### Report Overview

Natural Coconut Activated Carbon has a very high hardness and is more abrasion resistant than any other type. It is a totally natural, environmentally friendly product, that has a very small carbon foot print, since it is derived from coconut shells. As most of its pore structure consists of micropores (more than 80%), coconut shell carbon can efficiently absorb impurities with micropore molecular structure, such as those present in drinking water. In addition, because of its high abrasion resistance and exceptional chemical and physical characteristics, only coconut shell activated carbon can support applications such as recovery of gold and other precious metals.

The global Natural Coconut Activated Carbon market size was estimated at USD 350.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.45% during the forecast period.
