Abstracts

Natural diatomite, also known as diatomaceous earth, is a naturally occurring, soft, sedimentary rock or mineral composed primarily of the fossilized remains of diatoms, microscopic aquatic algae. These diatom shells are rich in silica and possess unique physical properties, including high porosity and absorbency. Natural diatomite is widely used in various industries, such as agriculture, filtration, construction, and cosmetics, due to its ability to absorb liquids, filter impurities, and serve as a lightweight and environmentally friendly material. It is often utilized in applications like soil amendments, water filtration, abrasive cleaners, and as an insulating material. The natural diatomite market is driven by the growing demand for sustainable and eco-friendly materials in various industries, including agriculture, filtration, and construction. Diatomite's unique properties, such as its high porosity and absorbency, make it a versatile and valuable resource. However, a significant challenge in this market is the need for responsible mining practices to protect natural diatomite deposits and minimize environmental impact. Sustainable sourcing and extraction methods are crucial considerations. Additionally, market competition and the rise of alternative materials pose challenges. Manufacturers must innovate to maintain diatomite's market presence and address sustainability concerns to meet evolving industry standards and customer preferences.

The global Natural Diatomite market size was estimated at USD 1226.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
