Abstracts

Natural food preservation refers to the application of naturally produced antimicrobial compounds that are obtained from plants, animals, and microbes to prevent food spoilage microorganisms, and the proliferation and growth of food-borne pathogens in food and food products. Food preservation techniques are developed to improve microbial quality and safety without causing nutritional and organoleptic losses. Therefore, the application of natural compounds from traditional medicinal plants as natural food preservatives are gaining great interest in the food industry, due to the potential to provide quality and safety benefits, with reduced impact on human health. Natural food preservatives are gaining interest among food technologists for their use as alternatives to physical- and chemical-based antimicrobial treatments. Natural food preservatives are safer and don't have adverse effect on human health.

The global Natural Food Preservatives market size was estimated at USD 756.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
