Abstracts

Natural functional sugars are specialized sweeteners that go beyond providing basic sweetness by offering additional health benefits, such as prebiotic effects, low glycemic impact, or enhanced mineral absorption, and include substances like allulose, tagatose, isomaltulose, and certain sugar alcohols like erythritol, which are often derived from natural sources or produced through enzymatic processes to mimic the taste and functionality of sucrose while addressing consumer demand for reduced-calorie, diabetic-friendly, and gut-health-promoting alternatives. This market has emerged in response to growing health consciousness, rising prevalence of lifestyle diseases, and regulatory shifts encouraging sugar reduction, positioning these products at the intersection of the food, beverage, and nutraceutical industries as key ingredients in products ranging from confectionery and baked goods to beverages and dietary supplements.
