The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Natural Gas Odorants competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Natural gas odorants are strong-smelling organic compounds or mixtures added at very low concentrations to colorless and odorless natural gas, creating a warning odor in the event of a leak, ensuring prompt detection when hazardous gas concentrations are reached. The mainstream odorant is tetrahydrothiophene (THT), which boasts strong chemical stability, oxidation resistance, low volatility, non-corrosiveness, and leaves no residue upon combustion. Global production in 2024 was estimated at approximately 27,000 tons, with an average selling price of US\$9,200 per ton.

The global Natural Gas Odorants market size was estimated at USD 248.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
