## Abstracts

Natural Language Processing consulting refers to specialised professional services that help organisations design, build, deploy and govern Natural Language Processing-based solutions that extract insight and automation from text, speech and conversational data across channels. Natural Language Processing consulting firms typically combine expertise in linguistics, machine learning and software engineering with domain and process knowledge to turn business problems (customer service, content search, document review, risk monitoring, knowledge management, etc.) into concrete use-cases and solution architectures. Engagements usually start with strategy and opportunity assessment (identifying high-value NLP use cases, ROI, data readiness, build vs buy decisions), followed by target-architecture design covering model stack (LLMs, classic ML, rules), data pipelines, integration into applications and workflows, security, compliance and monitoring. Consultants then support or lead implementation: collecting and labelling data, selecting or fine-tuning models, designing prompts and retrieval-augmented generation, building APIs and micro-services, integrating with channels (web, mobile, contact-centre, productivity tools) and existing platforms (CRM, ERP, content management, data warehouse or lakehouse).
