Report Overview:

Natural refrigerants are natural substances that serve as refrigerants in refrigeration systems (including refrigerators, HVAC, and air conditioning). They are alternatives to hydrofluorocarbon (HFC), hydro chlorofluorocarbon (HCFC) and chlorofluorocarbon (CFC) based refrigerants. Unlike other refrigerants, they are not synthetic chemicals and can sometimes be found in nature. Natural refrigerants are chemicals which occur in nature's bio-chemical processes. They do not deplete the ozone layer and make a negligible - or zero in the case of R717 (ammonia) - contribution to global warming. The high efficiency of natural refrigerants also means that they make a lower indirect contribution to global warming. They are not only used due to environmental sustainability as some applications are better suited to a particular natural refrigerant.

This report studies the global Natural Refrigerants market.

The Global Natural Refrigerants Market Size was estimated at USD 1957.79 million in 2023 and is projected to reach USD 3947.87 million by 2029, exhibiting a CAGR of 12.40% during the forecast period.
