The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Natural Resorbable Oral Repair Membrane competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Natural resorbable oral repair membrane is a barrier membrane used in oral tissue regeneration procedures such as Guided Bone Regeneration (GBR) or Guided Tissue Regeneration (GTR). It is made from natural biological materials, most commonly collagen derived from porcine or bovine sources (e.g., tendon, dermis, or pericardium). These membranes offer excellent biocompatibility and are gradually resorbed by enzymatic action in the body after serving their barrier function. They eliminate the need for surgical removal and help create a stable environment for bone or periodontal regeneration.
