Abstracts

Natural tagatose is a naturally occurring monosaccharide, specifically a hexose. It is a ketohexose sugar with the chemical formula $C_6H_{12}O_6$. It exists in small quantities in nature, mainly found in some dairy products such as yogurt and milk powder, and can also be found in the gum of certain plants like the *Sterculia setigera* from West Africa. It is formed when milk is heated, as the lactose in milk is hydrolyzed to galactose and then isomerized to tagatose. It is a "diastereomer" of fructose, with a white, odorless, crystalline powder appearance. It has a sweetness that is 92% that of sucrose, but with only about 38% of the calories of sucrose. It has several physiological functions, such as inhibiting hyperglycemia, improving the intestinal flora, and being non - cariogenic, and is widely used in the food, pharmaceutical, and cosmetic industries.
