Abstracts

Naval electro-optics systems are integrated sensor suites deployed on naval platforms?such as surface ships, submarines, and patrol craft?that utilize a combination of cameras, thermal imagers, infrared sensors, laser rangefinders, and image processing technologies to provide real-time surveillance, target acquisition, tracking, and situational awareness in maritime environments. These systems are critical for enhancing operational effectiveness across a spectrum of missions, including anti-piracy, coastal surveillance, search and rescue, navigation, and warfare, by enabling all-weather, day-and-night detection and identification of surface and aerial threats while minimizing the vessel?s electromagnetic signature. They often interface with broader combat management systems, contributing to layered defense strategies and improving decision-making under challenging conditions such as low visibility, electronic warfare, or cluttered maritime settings.

The global Naval Electro Optics System market size was estimated at USD 1250.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
