Abstracts

Navigation signal simulators are specialized electronic systems that replicate the signals transmitted by global navigation satellite systems (GNSS), such as GPS, GLONASS, Galileo, and BeiDou, along with other positioning, navigation, and timing (PNT) signals, to enable the testing, development, and validation of GNSS receivers and related equipment in controlled laboratory or field environments without relying on live satellite transmissions. These devices simulate various real-world conditions, including signal strength, atmospheric effects, multipath interference, orbital dynamics, and even intentional jamming or spoofing scenarios, allowing engineers and researchers to assess receiver performance, accuracy, sensitivity, and resilience under a wide range of operational and adversarial conditions.

The global Navigation Signal Simulator market size was estimated at USD 120.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
