### Report Overview

Non-destructive testing (NDT) – also known as nondestructive examination (NDE) and nondestructive inspection (NDI), depending on the industry – is an efficient way to inspect equipment because there's no need to shut down or enter an asset, increasing uptime and productivity. In opposition to its counterpart, destructive testing (DT), NDT's non-intrusive application does not materially affect the integrity of the asset being inspected. Nondestructive testing (NDT) plays a vital role in most industries. NDT in the oil and gas industry is critical for both the integrity of equipment and the safety of petroleum refining and extraction operations. Keeping potentially hazardous chemicals and fluids safely contained within pipes and pressure vessels means careful inspection of welds and metals for flaws and corrosion using ultrasonic and eddy current NDT testing solutions.
