Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Near Infrared Spectroscopy (NIR) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The near infrared spectrum is an electromagnetic radiation wave between visible light (Vis) and mid-infrared (MIR). The American Society for Testing and Materials (ASTM) defines the near-infrared spectral region as the region of 780-2526nm, which is found in the absorption spectrum. The first non-visible light zone. The near-infrared spectral region is consistent with the combination frequency of the vibration of hydrogen-containing groups (O-H, N-H, C-H) in organic molecules and the absorption region of multiple levels of frequency multiplication. By scanning the near-infrared spectrum of the sample, the hydrogen-containing groups of organic molecules in the sample can be obtained. The characteristic information of the cluster, and the use of near infrared spectroscopy to analyze samples has the advantages of convenience, rapidity, efficiency, accuracy and low cost, without destroying samples, without consuming chemical reagents, and without polluting the environment. Increasing Demand: Growth is driven by expanding demand in food safety, pharmaceutical compliance, agriculture automation, and process optimization in industries like petrochemicals. Technology Innovation: Technological innovations have an important role in driving the growth of the market. To sustain in the competitive market, manufacturers should develop new ideas and technologies and stay up-to-date with the advanced technologies. High Cost of High-End Instruments: Precision NIR spectrometers used in labs or regulated industries can be expensive, limiting access for SMEs or academic users. Competition from Alternative Techniques: Other fast analytical tools like Raman spectroscopy, UV-Vis, and laser-based sensors sometimes offer similar performance for certain applications.

The global Near Infrared Spectroscopy (NIR) market size was estimated at USD 610.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.40% during the forecast period.
