## Abstracts

Near-patient molecular solutions are diagnostic technologies designed to perform rapid, accurate molecular testing close to the patient, typically in point-of-care settings such as clinics, emergency rooms, or even at the bedside. By integrating sample preparation, nucleic acid amplification, and result interpretation into compact, user-friendly platforms, these solutions enable timely detection of infectious diseases, genetic disorders, and other molecular biomarkers without the need for centralized laboratory facilities. They significantly shorten turnaround times, support immediate clinical decision-making, and improve patient outcomes. The growth of the molecular POCT (point-of-care testing) diagnostics market is driven by a number of drivers. First, the global prevalence of infectious diseases and the growing problem of antibiotic resistance have increased the demand for rapid and accurate molecular diagnostics. Molecular POCT can quickly detect pathogens on site and provide reliable results, reducing waiting time and helping medical staff to be more efficient in infection control and treatment decisions. In addition, technological advances have improved the convenience and detection range of molecular POCT systems, promoting their widespread use in primary care institutions, emergency rooms and telemedicine to meet the needs of decentralized medical care. However, the molecular POCT market still faces some limiting factors. High costs and technical complexity are barriers to promotion in many regions, especially in resource-poor developing markets. In addition, although molecular POCT can provide results quickly, its accuracy may not be as good as laboratory testing in complex pathological conditions, limiting its application in certain high-precision demand environments. Strict regulatory requirements are also a major challenge. The complex approval process for medical devices in various countries may extend the time to market and affect the expansion speed of the market. In terms of international market share and ranking, the main manufacturers are Danaher (Cepe), Roche, Abbott, bioMérieux, Hologic, Thermo Fisher, Bio-Tech, Bio-Bio, Shengxiang Bio, Cayoudi,

Hangzhou Ustar, etc. In 2023, the top five manufacturers accounted for about 94% of the international market. Molecular POCT (Point-of-Care Testing) diagnosis is showing a rapid growth trend in the global medical market. With the outbreak of the new crown epidemic, the demand for molecular POCT has been unprecedentedly promoted. Molecular POCT technology enables disease detection to shift from traditional laboratory processes to immediate and convenient on-site testing, reducing the waiting time for testing and improving diagnostic efficiency. The increasing popularity of portable and rapid molecular testing equipment in primary care and remote areas has enabled high-precision molecular testing to be performed in places with insufficient medical resources. The development of such products has made the detection of infectious diseases (such as influenza, tuberculosis, sexually transmitted diseases, etc.) more convenient and improved public health. As the molecular POCT market continues to expand, technological innovation is also accelerating. The application of emerging technologies such as nanomaterials, microfluidics, and CRISPR has promoted the miniaturization of molecular POCT devices and improved detection sensitivity, making the test results more accurate and faster. In addition, with the application of AI and the Internet of Things, the data management and analysis capabilities of molecular POCT devices have also been significantly enhanced, enabling them to be combined with telemedicine and cloud data sharing to bring more intelligent medical solutions. These technological advances have promoted the global application of molecular POCT, thereby improving the efficiency of disease prevention and public health management.

The global Near-Patient Molecular Solution market size was estimated at USD 5833.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.60% during the forecast period.
