## Abstracts

NearLink is a new generation of short-range wireless communication technology independently developed in China. It is not a single protocol, but innovatively integrates two air interface technologies within a standard framework: SLB for high-performance needs and SLE for low-power scenarios, to match the diverse connectivity requirements of the Internet of Things era. This technology aims to overcome the limitations of traditional Bluetooth and Wi-Fi in terms of latency, reliability, and concurrency. Its core advantages are extremely low power consumption, microsecond-level ultra-low latency, strong anti-interference capabilities, and support for high-concurrency connections of up to 4096 devices. Therefore, NearLink can provide deterministic and highly reliable wireless connectivity for smart cars, smart homes, smart manufacturing, and personal terminal devices, becoming a key infrastructure for building a full-scenario intelligent interconnected ecosystem. NearLink technology has broad prospects and is widely regarded as a core engine driving the intelligent upgrading of industries, possessing a market potential exceeding trillions of yuan. Its development momentum is rapid. Since its commercialization in 2023, its ecosystem has expanded rapidly, with more than 1,200 alliance members, covering more than 200 products, and shipments exceeding 70 million units. It has achieved large-scale application in fields such as smart cars, industrial manufacturing, and smart homes. In the future, with the evolution of StarFlash 2.0 and the planned 3.0 standard, the technology will deepen towards passive IoT and integrated sensing and computing to meet the needs of more complex scenarios such as industrial wireless control and high-precision positioning.

The global NearLink Technology market size was estimated at USD 362.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.50% during the forecast period.
