Report Overview

Neck Banding Machines are known as shrink sleeving machines, shrink banders, tamper evident banders, neck banders, and, as some machines are capable of both, full body sleeveers or shrink labels. No matter what the name, neck banders convert lay flat tube roll stock into a shrink band by opening and re-creasing the tube stock so that it opens easier. The tube stock is then drawn back flat 90 degrees to its original position through the drive rollers and then is cut in any of several ways.
