Abstracts

Neck-mounted headphones, also known as neckband headphones, are a category of personal audio devices characterized by a flexible collar that rests around the user's neck, with earbuds that connect via short cables or are magnetically attached to the band itself. This design prioritizes portability and convenience, as the earpieces can be easily removed for use and stowed securely when not in use, reducing the risk of loss compared to fully wireless earbuds. They typically feature built-in batteries, microphones, and control buttons on the neckband, offering a balance between the wired stability of traditional headphones and the wireless freedom of true wireless earbuds, often with longer battery life due to the larger form factor accommodating a bigger battery.

The global Neck Mounted Headphones market size was estimated at USD 1250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
