Report Overview

Graphite electrodes can be divided into ultra-high power graphite electrodes, high power graphite electrodes and ordinary power graphite electrodes. Ultra-high-power graphite electrodes use the highest current density, and are significantly superior to the other two types of graphite electrodes in terms of resistivity, flexural strength, bulk density and thermal expansion coefficient. They are generally used in ultra-high-power electric arc furnaces for steelmaking. The other two types of graphite electrodes have lower unit energy consumption in the steelmaking process, which is the key direction for the future development of the graphite electrode industry.
