## Abstracts

The Needle-free Airtight Infusion Connector is an important innovation in modern infusion technology, designed to provide a safer, more convenient, and hygienic method for managing infusions. Unlike traditional infusion connectors, this needle-free connector eliminates the need for a steel needle to puncture the rubber stopper. Instead, it uses a mechanism that connects infusion devices or syringes to the indwelling catheter without the use of needles. This design not only prevents the repeated use of needles and reduces the risk of needlestick injuries for healthcare professionals, but it also maintains the airtight integrity of the infusion channel, preventing external contamination and air from entering the system. Whether used in Central Venous Catheters (CVC), Peripherally Inserted Central Catheters (PICC), or peripheral venous catheters, it allows for easy connection and disconnection while minimizing pain and discomfort caused by repeated punctures.

The global Needle Free Airtight Infusion Connector market size was estimated at USD 1480.74 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
