Abstracts

Needle Punched Polyester Nonwoven Fabric is a material with high air permeability, also known as needle-punched cotton or felt cloth. The process of needle-punched cotton is mainly produced and processed from PET polyester staple fiber, which goes through the process of fiber opening-ingredient ratio-carding-laying-netting-acupuncture-hot rolling-rolling and other processes. Needle-punched cotton has the characteristics of high porosity, good air permeability, high dust collection efficiency, and long service life that are unique to ordinary felt filter cloths, but it is relatively cheap. Because of its moderate temperature resistance, acid resistance, moderate alkalinity and very good wear resistance, it has become the most widely used variety in engineering geotextiles and non-woven filter materials.

The global Needle Punched Polyester Nonwoven Fabric market size was estimated at USD 1250.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
