Abstracts

Negative Pressure Wound Treatment, also known as Negative Pressure Wound Therapy (NPWT), is a medical technique used for the management and healing of various types of wounds. It involves the application of controlled negative pressure (suction) to a wound through the use of specialized equipment and dressings. The main objectives of negative pressure wound treatment are to promote wound healing, remove excess fluid or drainage, reduce swelling, and facilitate the closure of the wound. It can be used for both acute and chronic wounds, including surgical incisions, pressure ulcers, diabetic foot ulcers, venous ulcers, traumatic wounds, and burns. NPWT also aids in increasing blood flow to the wound area, reducing bacterial colonization, and stimulating the formation of healthy granulation tissue. Additionally, it can help close wounds, reduce the need for frequent dressing changes, and minimize the risk of infection and wound complications. The global Negative Pressure Wound Treatment (NPWT) market refers to the market for products and services related to the application of negative pressure wound therapy. This includes the devices and equipment used for NPWT, as well as the consumables such as dressings and disposables. The NPWT market has witnessed significant growth in recent years, driven by several factors such as the increasing prevalence of chronic wounds, the rising geriatric population, and the growing awareness about advanced wound care therapies. The market is also influenced by factors such as technological advancements, reimbursement policies, and healthcare infrastructure. The market is highly competitive and involves the participation of several key players, including manufacturers of NPWT devices, wound care companies, and healthcare service providers. Some of the prominent market players in the NPWT industry include KCI (an Acelyty company), Smith & Nephew plc, M?Inlycke Health Care AB, ConvaTec Group plc, Cardinal Health, Inc., and Talley Group, among others. Geographically, North America has traditionally been the largest market for NPWT due to the advanced healthcare infrastructure, high adoption of innovative

therapies, and favorable reimbursement policies. However, the Asia Pacific region is expected to witness significant growth in the coming years, driven by the rapidly improving healthcare infrastructure, rising healthcare expenditure, and increasing awareness about advanced wound care treatments.

The global Negative Pressure Wound Treatment market size was estimated at USD 3164.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
