Abstracts

Neglected tropical diseases (NTDs) are a diverse group of tropical infections which are common in low-income populations in developing regions of Africa, Asia, and the Americas. They are caused by a variety of pathogens such as viruses, bacteria, protozoa and helminths. The Neglected Tropical Diseases (NTDs) Drugs and Vaccine Market is driven by the pressing need to combat and eradicate diseases that predominantly affect marginalized and underserved populations in tropical regions. NTDs, which include diseases like malaria, dengue, and schistosomiasis, cause significant morbidity and mortality, making it imperative to develop treatments and vaccines. As global health initiatives and pharmaceutical companies focus on addressing NTDs, the demand for research, development, and access to effective drugs and vaccines continues to grow. However, a key challenge for this market is the need to overcome financial and regulatory hurdles that often hinder investment in NTD research and drug development. Ensuring equitable access to these treatments, addressing drug resistance, and overcoming logistic challenges in delivering vaccines to remote areas are ongoing obstacles. Additionally, the market faces competition from other health priorities and diseases, requiring sustained efforts to mobilize resources and global commitment to eliminate NTDs. Striking a balance between innovation, affordability, and accessibility while addressing the unique challenges of NTDs is crucial for the continued progress of the Neglected Tropical Diseases Drugs and Vaccine Market.

The global Neglected Tropical Diseases Drugs and Vaccine market size was estimated at USD 377.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
