Abstracts

Non-Emergency Medical Transportation Software (NEMT Software) is a dispatch and management system specifically designed for medical transportation services. It primarily arranges transportation for patients to non-emergency locations such as hospitals, clinics, and rehabilitation centers. This software solves problems such as low efficiency, travel delays, and chaotic billing associated with traditional manual dispatching, improving service quality and cost control. Gross profit margins average between 60% and 80%. The upstream of the NEMT software industry chain mainly relies on map navigation APIs (such as Google Maps), communication modules (SMS, voice, app push), and data servers and cloud platforms (such as AWS and Azure) to build efficient dispatch and information exchange systems. Downstream, it widely serves medical institutions, transportation companies, insurers, and patient-side apps, enabling travel booking, billing management, and service coordination. Future development will focus on integration with Electronic Medical Record (EMR) systems to automatically trigger travel demand, optimizing resource allocation through AI prediction, and linking with autonomous driving technology to improve safety and efficiency, while strengthening data privacy and compliance (such as HIPAA and GDPR) to meet healthcare industry standards.

The global NEMT Software market size was estimated at USD 305.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
