## Abstracts

Neodymium-doped glass is a special glass containing the rare earth element neodymium (Nd), which appears purple. Laser neodymium glass has many advantages such as good thermal stability, extremely high laser energy output, and excellent optical properties. It is widely used in the field of laser technology, especially playing an important role in high-energy lasers. Neodymium is the main element in neodymium glass materials. Due to export restrictions on rare earth ores and the scarcity of ores, global neodymium supply has come under greater pressure. The production cost of neodymium glass has increased, which to a certain extent has restricted the production and research and development progress of neodymium glass.

The global Neodymium-doped Glass market size was estimated at USD 280.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
