Report Overview:

Electronic health record (EHR) software—also often referred to as electronic medical record (EMR) software—addresses many of the same concerns for nephrologists as it does for practitioners in any medical specialty. Broadly speaking, this software will automate repetitive tasks, streamline documentation, improve access to information, enable more accurate and profitable coding and foster efficiency.

Nephrology EMR software is an electronic medical record system (more commonly referred to as an electronic health record, or EHR, system) that is specifically designed to be used by nephrology specialists. These EMRs / EHRs include specific functionality, features and data sets that will only be used by nephrologist practices; for example, they will be pre-programmed with nephrology CPT & ICD coding as well as templates that address specific nephrology-related fields.

While nephrology practices can certainly use general EMR or EHR software systems, utilizing a specialty-specific system will save time and improve accuracy of records, diagnosis, treatment, and billing.

The Global Nephrology Electronic Medical Record Software Market Size was estimated at USD 1643.42 million in 2023 and is projected to reach USD 2357.74 million by 2029, exhibiting a CAGR of 6.20% during the forecast period.
