Abstracts

Nestable presswood pallets are made by molding damaged logs, wood waste and other wood by-products into new export pallets. It is also possible to use less energy and recycle wood products for the environment. Nested presswood pallets save space, leaving more room for product, and the pallets can be reused for long periods of time. The expansion of the nestable molded wood pallets market can be attributed to high demand in e-commerce transportation, logistics, building and construction, which is expected to drive the demand for molded wood pallets. The use of packaging solutions has increased, offering convenience, as well as better efficiency than other pallets, and the introduction of RFID tags for pallet tracking can easily operate security monitoring systems as well as automated inventory and warehouse management. As the use of RFID tags continues to increase in the global pallet industry, the consumption of pallets is expected to increase in the coming years.

The global Nestable Presswood Pallets market size was estimated at USD 2448.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
