Abstracts

Net Weight Filling System is a high-precision automated filling device used to accurately fill liquid, powder or granular materials according to the net weight of the product. The system monitors the filling process in real time through advanced weighing sensors to ensure that the material in each container reaches the set target weight. Compared with traditional volumetric filling, Net Weight Filling System can eliminate filling errors caused by density changes, so it is widely used in industries with strict requirements on product weight, such as food and beverage, chemicals and pharmaceuticals.

The global Net Weight Filling System market size was estimated at USD 755.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
