Report Overview

Network behavior analysis software tools are designed to add an additional level of security to other security software like intrusion prevention systems (IPS), firewalls or security information and event management (SIEM) systems.

While other network security software is designed to detect specific endpoint intrusion, NBA tools listen to IP traffic flow systems or network packets to establish a baseline of normal activity, and then look for network flow anomalies. This enables security and network managers to be alerted of any suspicious activity which is outside of normal traffic flow so that remedial action can be taken before any significant damage is done.
