Abstracts

Network cabling solutions refer to a combination of wired transmission infrastructure built around data communication systems. This includes copper cabling (such as Cat6/Cat6A/Cat7 twisted-pair cables), fiber optic cabling (OM3/OM4/OS2 fiber optics), patch panels, patch cords, modules, cabinets, and cable trays, among other physical connection components. Through structured design, it achieves signal transmission, network isolation, bandwidth expansion, and high-speed communication in data centers, commercial buildings, and industrial networks. This solution typically adheres to international standards such as TIA/EIA-568 and ISO/IEC 11801, forming a complete topology through horizontal cabling, vertical backbone cabling, and device interconnection, achieving data transmission capabilities from 10Gbps to 100Gbps, while also being compatible with PoE, edge computing devices, and intelligent building terminals. Its applications cover data centers, government and enterprise computer rooms, smart factories, building automation, security monitoring, and FTTO/FTTE architectures, providing a stable physical transmission foundation for cloud computing, IoT, high-definition video, and AI terminals. It is a key underlying support product for modern information infrastructure.
