A network security platform is an integrated, centralized software solution that provides comprehensive protection for an organization's digital infrastructure by unifying multiple security functions such as firewalls, intrusion detection and prevention, endpoint security, threat intelligence, vulnerability management, and security information and event management (SIEM) into a single, cohesive system. It enables automated threat detection, real-time monitoring, policy enforcement, and coordinated response across networks, endpoints, cloud environments, and applications, reducing complexity, improving visibility, and enhancing an organization's ability to defend against increasingly sophisticated cyber threats.
