Abstracts

A Neural Processing Unit (NPU) is a specialized class of microprocessor designed to accelerate artificial intelligence and machine learning tasks?particularly neural network computations?by efficiently handling the massive parallel processing requirements inherent in matrix multiplications, convolutions, and other tensor operations. Unlike general-purpose CPUs or even GPUs, which are more flexible but less optimized for AI workloads, NPUs are architecturally tailored for low-latency, energy-efficient inference and training operations, making them essential components in devices ranging from smartphones and autonomous vehicles to data centers and edge computing systems where real-time AI processing is critical.

The global Neural Processing Unit market size was estimated at USD 8500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 25.00% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Neural Processing Unit market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.
