Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Neural Processing Unit (NPU) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Field Programmable Logic Device (FPLD) is a programmable logic device that can be reconfigured to perform different logic functions. An FPLD typically consists of a programmable logic array (PLA) and programmable input/output (I/O) units. The PLA is a matrix of programmable logic gates that can be reconfigured to perform different logic functions. The I/O units are used to connect to other circuits and provide input and output functions. FPLDs are commonly used in digital circuit design, such as in embedded systems, to implement control logic, state machines, and data paths, among other functions. Driven by the wave of generative artificial intelligence (AIGC), the continuous R&D investment and application demand are like a surging river, which has stimulated unprecedented enthusiasm in the computing industry and also driven the AI chip field to increase its investment at full speed and be ready to go; and as the cornerstone of supporting AI chip architecture, the architectural design of the neural network processor (NPU) not only directly determines the computing performance and energy efficiency of AI reasoning, but also is related to the system's flexible adaptability, future scalability and operational security; at the same time, with the increasing diversification of intelligent computing scenarios, from large-scale data centers in the cloud to embedded devices on the edge to in-vehicle intelligent systems, the design concept of the new generation of NPU is also constantly evolving to meet the ever-changing application needs.

The global Neural Processing Unit (NPU) market size was estimated at USD 8343.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of

18.10% during the forecast period.
