Abstracts

Neuroactive insecticides are a class of agrochemicals that target the nervous systems of insect pests, disrupting key physiological processes such as neurotransmission, ion channel regulation, or synaptic function to induce paralysis or death; these compounds include widely used chemical families such as neonicotinoids, which act as agonists on nicotinic acetylcholine receptors, as well as newer agents like diamides that target ryanodine receptors, offering modes of action distinct from older neurotoxins like organophosphates or pyrethroids, thereby providing tools for resistance management and integrated pest control strategies in modern agriculture.

The global Neuroactive Insecticides market size was estimated at USD 2850.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
